```

## 7. USEFUL MATHEMATICAL FACTS

**7.1. Prime counting function ( $\pi(x)$ ).** The prime counting function is asymptotic to  $\frac{x}{\log x}$ , by the prime number theorem.

|          |    |                 |                 |                 |                 |                 |                 |                 |
|----------|----|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
| x        | 10 | 10 <sup>2</sup> | 10 <sup>3</sup> | 10 <sup>4</sup> | 10 <sup>5</sup> | 10 <sup>6</sup> | 10 <sup>7</sup> | 10 <sup>8</sup> |
| $\pi(x)$ | 4  | 25              | 168             | 1.229           | 9.592           | 78.498          | 664.579         | 5.761.455       |

**7.2. Partition function.** The partition function  $p(x)$  counts show many ways there are to write the integer  $x$  as a sum of integers.

|      |        |        |        |         |         |             |        |
|------|--------|--------|--------|---------|---------|-------------|--------|
| x    | 36     | 37     | 38     | 39      | 40      | 41          | 42     |
| p(x) | 17.977 | 21.637 | 26.015 | 31.185  | 37.338  | 44.583      | 53.174 |
| x    | 43     | 44     | 45     | 46      | 47      | 100         |        |
| p(x) | 63.261 | 75.175 | 89.134 | 105.558 | 125.754 | 190.569.292 |        |

**7.3. Catalan numbers.** Catalan numbers are defined by the recurrence:

$$C_{n+1} = \sum_{i=0}^n C_i C_{n-i}$$

A closed formula for Catalan numbers is:

$$C_n = \frac{1}{n+1} \binom{2n}{n} = \binom{2n}{n} - \binom{2n}{n+1}$$

**7.4. Stirling numbers of the first kind.** These are the number of permutations of  $I_n$  with exactly  $k$  disjoint cycles. They obey the recurrence:

$$\begin{bmatrix} n \\ k \end{bmatrix} = (n-1) \begin{bmatrix} n-1 \\ k \end{bmatrix} + \begin{bmatrix} n-1 \\ k-1 \end{bmatrix}$$

**7.5. Stirling numbers of the second kind.** These are the number of ways to partition  $I_n$  into exactly  $k$  sets. They obey the recurrence:

$$\begin{Bmatrix} n \\ k \end{Bmatrix} = k \begin{Bmatrix} n-1 \\ k \end{Bmatrix} + \begin{Bmatrix} n-1 \\ k-1 \end{Bmatrix}$$

A “closed” formula for it is:

$$\begin{Bmatrix} n \\ k \end{Bmatrix} = \frac{1}{k!} \sum_{j=0}^k (-1)^{k-j} \binom{k}{j} j^n$$

**7.6. Bell numbers.** These count the number of ways to partition  $I_n$  into subsets. They obey the recurrence:

$$\mathcal{B}_{n+1} = \sum_{k=0}^n \binom{n}{k} \mathcal{B}_k$$

|                 |    |     |     |       |        |         |         |           |
|-----------------|----|-----|-----|-------|--------|---------|---------|-----------|
| x               | 5  | 6   | 7   | 8     | 9      | 10      | 11      | 12        |
| $\mathcal{B}_x$ | 52 | 203 | 877 | 4.140 | 21.147 | 115.975 | 678.570 | 4.213.597 |

**7.7. Turán’s theorem.** No graph with  $n$  vertices that is  $K_{r+1}$ -free can have more edges than the Turán graph: A  $k$ -partite complete graph with sets of size as equal as possible.

**7.8. Generating functions.** A list of generating functions for useful sequences:

|  |                         |
|--|-------------------------|
| $(1, 1, 1, 1, 1, \dots)$                                     | $\frac{1}{1-z}$         |
| $(1, -1, 1, -1, 1, \dots)$                                   | $\frac{1}{1+z}$         |
| $(1, 0, 1, 0, 1, 0, \dots)$                                  | $\frac{1}{1-z^2}$       |
| $(1, 0, \dots, 0, 1, 0, 1, 0, \dots, 0, 1, 0, \dots)$        | $\frac{1}{1-z^2}$       |
| $(1, 2, 3, 4, 5, 6, \dots)$                                  | $\frac{1}{(1-z)^2}$     |
| $(1, \binom{m+1}{m}, \binom{m+2}{m}, \binom{m+3}{m}, \dots)$ | $\frac{1}{(1-z)^{m+1}}$ |
| $(1, c, \binom{c+1}{2}, \binom{c+2}{3}, \dots)$              | $\frac{1}{(1-z)^c}$     |
| $(1, c, c^2, c^3, \dots)$                                    | $\frac{1}{1-cz}$        |
| $(0, 1, \frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \dots)$       | $\ln \frac{1}{1-z}$     |

A neat manipulation trick is:

$$\frac{1}{1-z} G(z) = \sum_n \sum_{k \leq n} g_k z^n$$

**7.9. Polyominoes.** How many free (rotation, reflection), one-sided (rotation) and fixed  $n$ -ominoes are there?

| n         | 3 | 4  | 5  | 6   | 7   | 8     | 9     | 10     |
|-----------|---|----|----|-----|-----|-------|-------|--------|
| free      | 2 | 5  | 12 | 35  | 108 | 369   | 1.285 | 4.655  |
| one-sided | 2 | 7  | 18 | 60  | 196 | 704   | 2.500 | 9.189  |
| fixed     | 6 | 19 | 63 | 216 | 760 | 2.725 | 9.910 | 36.446 |

**7.10. The twelvefold way (from Stanley).** How many functions  $f: N \rightarrow X$  are there?

| $N$     | $X$     | Any $f$   | Injective      | Surjective                                |
|---------|---------|---|----------------|---|
| dist.   | dist.   | $x^n$   | $(x)_n$        | $x! \begin{Bmatrix} n \\ x \end{Bmatrix}$ |
| indist. | dist.   | $\binom{x+n-1}{n}$  | $\binom{x}{n}$ | $\binom{n-1}{n-x}$                        |
| dist.   | indist. | $\begin{Bmatrix} n \\ 1 \end{Bmatrix} + \dots + \begin{Bmatrix} n \\ x \end{Bmatrix}$ | $[n \leq x]$   | $\begin{Bmatrix} n \\ k \end{Bmatrix}$    |
| indist. | indist. | $p_1(n) + \dots + p_x(n)$   | $[n \leq x]$   | $p_x(n)$                                  |

Where  $\begin{pmatrix} a \\ b \end{pmatrix} = \frac{1}{b!} (a)_b$  and  $p_x(n)$  is the number of ways to partition the integer  $n$  using  $x$  summands.

**7.11. Common integral substitutions.** And finally, a list of common substitutions:

|                            |                   |                                       |
|----------------------------|-------------------|---------------------------------------|
| $\int F(\sqrt{ax+b})dx$    | $u = \sqrt{ax+b}$ | $\frac{2}{a} \int uF(u)du$            |
| $\int F(\sqrt{a^2-x^2})dx$ | $x = a \sin u$    | $a \int F(a \cos u) \cos u du$        |
| $\int F(\sqrt{x^2+a^2})dx$ | $x = a \tan u$    | $a \int F(a \sec u) \sec^2 u du$      |
| $\int F(\sqrt{x^2-a^2})dx$ | $x = a \sec u$    | $a \int F(a \tan u) \sec u \tan u du$ |
| $\int F(e^{ax})dx$         | $u = e^{ax}$      | $\frac{1}{a} \int \frac{F(u)}{u} du$  |
| $\int F(\ln x)dx$          | $u = \ln x$       | $\int F(u)e^u du$                     |

**7.12. Table of non-trigonometric integrals.** Some useful integrals are:

|                                   |  |
|-----------------------------------|--|
| $\int \frac{dx}{x^2+a^2}$         | $\frac{1}{a} \arctan \frac{x}{a}$                              |
| $\int \frac{dx}{x^2-a^2}$         | $\frac{1}{2a} \ln \frac{x-a}{x+a}$                             |
| $\int \frac{dx}{a^2-x^2}$         | $\frac{1}{2a} \ln \frac{a+x}{a-x}$                             |
| $\int \frac{dx}{\sqrt{a^2-x^2}}$  | $\arcsin \frac{x}{a}$  |
| $\int \frac{dx}{\sqrt{x^2-a^2}}$  | $\ln(u + \sqrt{x^2-a^2})$                                      |
| $\int \frac{dx}{x\sqrt{x^2-a^2}}$ | $\frac{1}{a} \operatorname{arcsec} \left  \frac{u}{a} \right $ |
| $\int \frac{dx}{x\sqrt{x^2+a^2}}$ | $-\frac{1}{a} \ln \left( \frac{a+\sqrt{x^2+a^2}}{x} \right)$   |
| $\int \frac{dx}{x\sqrt{a^2-x^2}}$ | $-\frac{1}{a} \ln \left( \frac{a+\sqrt{a^2-x^2}}{x} \right)$   |

**7.13. Table of trigonometric integrals.** A list of common and not-so-common trigonometric integrals:

|                     |   |
|---------------------|---|
| $\int \tan x dx$    | $-\ln  \cos x $   |
| $\int \cot x dx$    | $\ln  \sin x $  |
| $\int \sec x dx$    | $\ln  \sec x + \tan x $   |
| $\int \csc x dx$    | $\ln  \csc x - \cot x $   |
| $\int \sec^2 x dx$  | $\tan x$  |
| $\int \csc^2 x dx$  | $\cot x$  |
| $\int \sin^n x dx$  | $\frac{-\sin^{n-1} x \cos x}{n} + \frac{n-1}{n} \int \sin^{n-2} x dx$ |
| $\int \cos^n x dx$  | $\frac{\cos^{n-1} x \sin x}{n} + \frac{n-1}{n} \int \cos^{n-2} x dx$  |
| $\int \arcsin x dx$ | $x \arcsin x + \sqrt{1-x^2}$  |
| $\int \arccos x dx$ | $x \arccos x - \sqrt{1-x^2}$  |
| $\int \arctan x dx$ | $x \arctan x - \frac{1}{2} \ln  1-x^2 $                               |
