```

7. Useful mathematical facts

7.1. Prime counting function ($\pi(x)$). The prime counting function is asymptotic to $\frac{x}{\log x}$, by the prime number theorem.

	10	10^2	10^3	10^4	10^5	10^6	10^7	10^8
$\pi(x)$	4	25	168	1.229	9.592	78.498	664.579	50.847.534

7.2. Catalan numbers. Catalan numbers are defined by the recurrence:

$$C_{n+1} = \sum_{i=0}^{n} C_i C_{n-i}$$

A closed formula for Catalan numbers is:

$$C_n = \frac{1}{n+1}\binom{2n}{n} = \binom{2n}{n} - \binom{2n}{n+1}$$

7.3. Stirling numbers of the first kind. These are the number of permutations of I_n with exactly k disjoint cycles. They obey the recurrence:

$$\begin{bmatrix} n \\ k \end{bmatrix} = (n-1)\begin{bmatrix} n-1 \\ k \end{bmatrix} + \begin{bmatrix} n-1 \\ k-1 \end{bmatrix}$$

7.4. Stirling numbers of the second kind. These are the number of ways to partition I_n into exactly k sets. They obey the recurrence:

$$\begin{Bmatrix} n \\ k \end{Bmatrix} = k\begin{Bmatrix} n-1 \\ k \end{Bmatrix} + \begin{Bmatrix} n-1 \\ k-1 \end{Bmatrix}$$

A "closed" formula for it is:

$$\begin{Bmatrix} n \\ k \end{Bmatrix} = \frac{1}{k!}\sum_{j=0}^{k}(-1)^{k-j}\binom{k}{j}j^n$$

7.5. Turán's theorem. No graph with n vertices that is K_{r+1}-free can have more edges than the Turán graph: A k-partite complete graph with sets of size as equal as possible.

7.6. Table of trigonometric integrals. A list of common and not-so-common trigonometric integrals:

$\int \tan x\, dx$	$-\ln|\cos x|$
$\int \cot x\, dx$	$\ln|\sin x|$
$\int \sec x\, dx$	$\ln|\sec x + \tan x|$
$\int \csc x\, dx$	$\ln|\csc x - \cot x|$
$\int \sec^2 x\, dx$	$\tan x$
$\int \csc^2 x\, dx$	$\cot x$
$\int \sin^n x\, dx$	$\frac{-\sin^{n-1} x \cos x}{n} + \frac{n-1}{n}\int \sin^{n-2} x\, dx$
$\int \cos^n x\, dx$	$\frac{\cos^{n-1} x \sin x}{n} + \frac{n-1}{n}\int \cos^{n-2} x\, dx$
$\int \arcsin x\, dx$	$x\arcsin x + \sqrt{1-x^2}$
$\int \arccos x\, dx$	$x\arccos x - \sqrt{1-x^2}$
$\int \arctan x\, dx$	$x\arctan x - \frac{1}{2}\ln|1-x^2|$

7.7. Generating functions. A list of generating functions for useful sequences:

$(1,1,1,1,1,1,\ldots)$	$\frac{1}{1-z}$
$(1,-1,1,-1,1,-1,\ldots)$	$\frac{1}{1+z}$
$(1,0,1,0,1,0,\ldots)$	$\frac{1}{1-z^2}$
$(1,0,\ldots,0,1,0,1,0,\ldots,0,1,0,\ldots)$	$\frac{1}{1-z^2}$
$(1,2,3,4,5,6,\ldots)$	$\frac{1}{(1-z)^2}$
$(1,\binom{m+1}{m},\binom{m+2}{m},\binom{m+3}{m},\ldots)$	$\frac{1}{(1-z)^{m+1}}$
$(1,c,\binom{c+1}{2},\binom{c+2}{3},\ldots)$	$\frac{1}{(1-z)^c}$
$(1,c,c^2,c^3,\ldots)$	$\frac{1}{1-cz}$
$(0,1,\frac{1}{2},\frac{1}{3},\frac{1}{4},\ldots)$	$\ln\frac{1}{1-z}$

A neat manipulation trick is:

$$\frac{1}{1-z}G(z) = \sum_n \sum_{k\le n} g_k z^n$$
